

Job description and person specification

Together, we are making life better for our communities

Our behaviours, our values, our mission

We will treat you as an individual; feeling valued, engaged and listened to; a focus on health & wellbeing, continuing development, career progression and equality of opportunity; sustainable approach to addressing inequality; offering complete care and concern for our workforce

JOB DESCRIPTION

DATE: JANUARY 2026

REF NO:

JOB DETAILS

JOB TITLE: Applications Developer

BAND: 6

HOURS: See Contract of Employment

DEPARTMENT: MPFT Digital > Application Development

LOCATION: See Contract of Employment

REPORTS TO: Principal Developer (Applications)

ACCOUNTABLE TO: Head of Application Development & AI

RESPONSIBLE FOR:

- Specialises in application development and works with stakeholders to identify opportunities for application improvements, automation and AI-assisted workflow enhancements.
- Develops and builds application features from agreed specifications primarily using the Trust's core stack (.NET/C#, SQL Server, React, React Native, TypeScript, HTML/CSS/Tailwind).
- Supports the delivery and maintenance of application services (web and mobile), under the direction of the Principal Developer (Applications).
- Supports the delivery and maintenance of SharePoint where required, including workflows, pages/sites and content updates.
- Implements releases and environment changes in line with agreed CI/CD processes.
- Develops and runs tests to validate application changes.
- Maintains and supports existing applications.
- Monitors and fixes defects or performance issues where required.
- Builds and maintains documentation to support reliable operations and change control.

- Provides day-to-day coaching and support to junior team members or trainees, including task guidance, peer review and sharing good practice across application development.

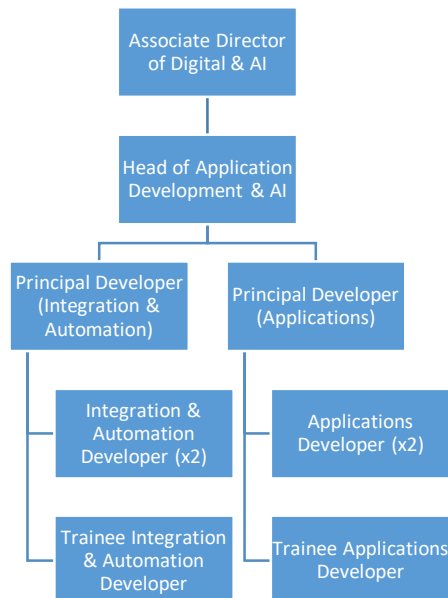

WORKING RELATIONSHIPS

INTERNAL:	MPFT Digital Teams, MPFT Clinical Teams, MPFT Corporate & Research Teams, Clinical Safety Officers, Care Group Leads, Project Management Office, Clinical Safety Leads, Service Leads.
EXTERNAL:	NHS Organisations, research organisations, suppliers, contractors, Integrated Care Boards, Integrated Care Systems, Local Authorities, National Bodies, UK Health Security Agency.

JOB PURPOSE

- Builds, tests and maintains bespoke web and mobile applications that streamline how information is processed and shared across the organisation.
- Works with stakeholders to identify opportunities, document expected benefits and deliver reliable, reusable applications and services.
- Monitors applications in production, responds to failures and adapts solutions to changing needs.
- Maintains a central library of shared components and documentation so applications are robust and supportable.
- Supports integration delivery by building and maintaining APIs and integration points, working closely with the Integration & Automation team where required.
- Contributes to AI-enabled workflow enhancements by integrating approved AI services and MCP patterns where applicable, ensuring safe and compliant implementation.
- Uses AI-assisted development approaches to improve delivery speed and quality, applying a human-in-the-loop model with appropriate governance, code review and testing.

ORGANISATIONAL STRUCTURE

KEY RESPONSIBILITIES

Main duties and responsibilities

1. Write, amend, refactor and document application code using modern tooling and technologies, such as .NET (C#), SQL Server, React, React Native, TypeScript, HTML, CSS, Tailwind, Microsoft Power Platform, SharePoint, IIS and Azure services.
2. Operate and maintain applications in production and act as first-line support for application issues.
3. Apply modern UI/UX principles to deliver usable, accessible and responsive application solutions.
4. Build and maintain front-end features that follow approved patterns such as the NHS Design System and MPFT Design System.
5. Contribute to and maintain a shared component library, including documentation, examples, and versioning to encourage consistent use across applications.
6. Help assess requirements, document solutions and benefits, and prepare specifications.
7. Work with stakeholders to identify service improvement opportunities that improve application features.
8. Quickly assess feasibility of new opportunities and feed into prioritisation.
9. Follow agreed standards and methods and work with colleagues to undertake code reviews.

10. Keep skills current, track technology changes, propose improvements and contribute to modern, well-engineered solutions.
11. Apply security controls and handle information safely. Help identify risks and mitigations, including secure coding and governance and escalate concerns appropriately.
12. Support and maintain live applications. Troubleshoot using modern tools and deploy releases via agreed CI/CD processes.
13. Estimate own effort and contribute to planning, following the agreed delivery methodology.
14. Produce Standard Operating Procedures (SOPs), run-books and user-facing guidance, supporting adoption/training where required.
15. Support CAB activities by collating, tracking and presenting evidence for assurance where required.
16. Prepare project plans and status reports in line with internal processes for assigned workstreams.
17. Work closely with the Principal Developer (Applications) on features, deployment schedules, service impacts and expected benefits.
18. Communicate clearly with stakeholders and project teams.
19. Track delivery against targets, flag issues early and help adjust plans to retain quality and to meet required timeframes.
20. Contribute to reliable day-to-day operations of the application portfolio and supporting services.
21. Grow capability to deliver changes of increasing complexity with greater autonomy over time and support knowledge sharing within the team.
22. Support the delivery and maintenance of APIs, working closely with the Integration & Automation team where required.
23. Carry out routine monitoring of applications (availability, errors and performance), escalating issues and contributing to incident/problem resolution activities.
24. Maintain accurate documentation for applications to support reliable operations.
25. Use AI-assisted development techniques to accelerate delivery and improve quality, while maintaining human oversight through peer review, testing, documentation and governance.
26. Deliver AI-enabled application features using approved AI services and MCP patterns, ensuring traceability, safe handling of information, and compliance with governance, security and clinical safety requirements.
27. Provide day-to-day coaching and support to junior team members or trainees, including task guidance, peer review and sharing good practice across application development.

Systems and equipment

- 28. Be familiar with the team's software and hardware requirements and liaise with, and advise management, where deficiencies impede productivity.
- 29. Proactively engage in training and development opportunities to increase proficiency in the Trust's core stack and tooling such as .NET (C#), SQL Server, React, React Native, TypeScript, HTML, CSS, Tailwind, Microsoft Power Platform, SharePoint, IIS and Azure services.
- 30. Share technical knowledge with other team members and users as appropriate.

Decisions and judgements

- 31. Work co-operatively with stakeholders to identify how applications may support service needs and improve ways of working.
- 32. Work is self-managed under supervision. Act independently within guidelines, deciding when it is necessary to refer to senior colleagues.
- 33. Make recommendations taking into account a range of factors (e.g. user needs, technical constraints, security, governance, clinical safety).
- 34. Work through issues raised, find solutions where possible, and adhere to the change management process.

Communication and relationships

- 35. Persuade staff of the importance of developments, negotiate and motivate stakeholders on delivery (including linking with other initiatives), and communicate sensitive information about performance and change where required.
- 36. Engage mainly with colleagues with limited exposure to service users.
- 37. Communicate to a wide variety of stakeholders by written and verbal means, tailoring technical content to the audience.

Physical demands of the job

- 38. Present to varying size audiences where necessary.
- 39. High levels of concentration required when developing, testing and supporting applications. Frequent interruptions from colleagues is not uncommon.
- 40. Required to sit for lengthy periods using VDU when undertaking design/build/support activities.
- 41. May be asked to work from home for extended periods to support infection control and service needs.

Most challenging/difficult parts of the job

- 42. Maintaining concentration when working on ICT issues which may be complex or multi-threaded (e.g. designing application features, diagnosing defects spanning UI/API/data, producing technical specifications and presentations).
- 43. Maintaining attention to detail for prolonged periods whilst dealing with frequent interruptions.
- 44. Supporting production issues across applications and dependent services, balancing urgency with safe change, documentation and good engineering practice.

JOB STATEMENT

Infection Control
Maintain an up to date awareness of the infection control precautions relevant to your area of work and implement these in practice. As a minimum, this must include hand hygiene, the use of personal protective equipment, the use and disposal of sharps and communicating the importance to patients, prison staff and other health care staff you are working with. Details of the precautions and sources of advice and support to assess and manage infection control risks are provided through mandatory training which all staff must attend at intervals defined in the Trust policy on mandatory training and can be found in the Trust's infection control policies and national guidance, such as that published by NICE.
Learning and Development
As an employee of the Trust, you have a responsibility to participate, promote and support others in undertaking learning and development activities. This includes a proactive approach to ensuring you meet the statutory/mandatory training requirements of your role, and engaging in PDC / appraisal processes in line with Trust policy and guidance.
Health and Safety
As an employee of the trust you have a responsibility to abide by the safety practices and codes authorised by the trust. You have an equal responsibility with management, for maintaining safe working practices for the health and safety of yourself and others.
Constitution, Competence and Capability
As an employee of the Trust you have a responsibility to promote and abide by the rights and responsibilities outlined in the NHS Constitution. You are additionally expected to adhere to Organisational/National/Regulatory Codes of Practice relevant to the role you are employed to undertake. At all times it is expected that you will limit the scope of your practice to your acquired level of competence and capability.
Dignity at Work Statement
Midlands Partnership University NHS Foundation Trust is committed to treating all of our staff with dignity and respect. You are responsible for behaving in a way that is consistent with the aims of our Equality and Diversity Policy. This includes not discriminating unfairly in any area of your work and not harassing or otherwise intimidating other members of staff.
Safeguarding Children and Vulnerable Adults
All Trust employees are required to act in such a way that at all times safeguards (and promotes) the health and well-being of children and vulnerable adults. Familiarisation with and adherence to Trust Safeguarding policies is an essential requirement of all employees as is participation in related mandatory/statutory training.
Environmental Sustainability and Net Zero
As an employee of the Trust you have a responsibility to be familiar with policies and procedures relating to environmental sustainability and the Net Zero agenda. You are actively encouraged and supported to explore and implement sustainable ways of working within your role to reduce carbon and minimise the environmental impact of health and social care.

PERSON SPECIFICATION

JOB TITLE:	Applications Developer		
DEPARTMENT:	Application Development	BAND:	6

*Assessed by: A = Application I = Interview R = References

ESSENTIAL CRITERIA	*	DESIRABLE CRITERIA	^
QUALIFICATIONS & TRAINING			
- Educated to degree level (computer/computing science) or equivalent level of qualification in IT/Digital, or equivalent level of experience. - Evidence of continuing professional development (CPD) in relevant fields (e.g. application development, testing/quality, secure development, or AI-enabled delivery).	A/I	- Evidence of relevant certifications or structured learning (e.g. Microsoft/.NET, Azure fundamentals, security, testing, or similar). - Evidence of learning in AI-assisted development and/or safe use of AI services/endpoints in application features.	A/I
EXPERIENCE			
- Experience working with industry standard coding languages / software development platforms. - Experience designing, developing and supporting applications in a complex environment. - Experience working with complex datasets, including designing queries and handling data quality issues. - Experience designing, developing and querying large databases (e.g. SQL Server or equivalent). - Experience of documenting solutions and system dependencies (e.g.	A/I/R	- NHS or public sector experience (or evidence of working in regulated environments). - Experience building modern web applications and APIs using the Trust's core technology stack: .NET (C#), SQL Server, React, TypeScript, HTML and CSS (or demonstrably equivalent experience). - Experience supporting application APIs/integration points and working with integration teams/suppliers to troubleshoot end-to-end issues. - Experience contributing to AI-enabled application features (e.g. using	A/I/R

requirements, technical notes, runbooks, release notes). • Understanding of exceptions and error handling approaches in application services. • Awareness of change impact and the need to update existing applications and dependent services. • Experience of system management and support (e.g. supporting live applications, troubleshooting and assisting with releases).		approved AI services/endpoints in applications). • Experience contributing to non-functional assurance (e.g. performance/load testing support, vulnerability remediation activities, DR/backup considerations). • Experience working with SharePoint (M365/Online preferred) and/or web CMS platforms. • Understanding of information flows between NHS organisations (e.g. cross-organisation data sharing and dependencies).	
SKILLS, KNOWLEDGE & ABILITIES			
• Strong hands-on software development skills, including analysis, solution design, clean coding and code review. • Strong development capability in the Trust's core stack: .NET (C#), SQL Server, React, TypeScript, HTML and CSS (or demonstrably equivalent experience). • Ability to define and apply effective testing approaches, including unit/integration testing and support for system/UAT. • Ability to apply secure development practices, including awareness of common vulnerabilities (e.g. OWASP Top 10) and safe handling of sensitive data. • Working knowledge of information handling controls relevant to NHS environments, including safe haven practices where applicable, and the ability to work appropriately with highly sensitive data. • Ability to design and build supportable applications, including logging,	A/I	• Familiarity with CI/CD practices and automated testing tooling. • Familiarity with non-functional assurance concepts (backup/restore, DR testing, performance/load testing, vulnerability management/pen test remediation). • Knowledge of accessibility standards and inclusive design practices for digital services. • Familiarity with NHS digital standards and assurance concepts relevant to applications (e.g. DTAC and DCB0129 awareness where applicable). • Familiarity with structured evidence gathering for audit and assurance activities (e.g. DSPT contributions). • Understanding of IM&T within the NHS (teams, ways of working, governance and operational processes). • SharePoint administration experience.	A/I

monitoring/alerting awareness, and clear exception handling. • Ability to use AI-assisted development safely and effectively (human-in-the-loop), maintaining strong controls such as peer review, testing and documentation. • Strong documentation skills (technical notes, support notes/runbooks and user guidance) appropriate for operational support and audit needs. • Strong communication and stakeholder management skills, able to explain technical topics clearly to non-technical audiences. • Ability to plan, prioritise and deliver work to deadlines; comfortable working with limited supervision and managing competing demands. • Working knowledge of confidentiality, information governance and data protection requirements relevant to NHS environments. • Ability to support users with adoption, including explaining changes and contributing to user guidance/training where required.			
PERSONAL ATTRIBUTES			
• Enthusiastic and proactive approach to improvements; takes ownership of tasks and follows through. • Willingness and motivation to learn and self-develop; keeps skills current through CPD. • Confident, positive and friendly approach; focused and detail oriented. • Problem solving and analytical techniques; reliable and trustworthy.	A/I/R	• Sharing skills and knowledge with other members of the team (including coaching junior colleagues). • Interest in AI-enabled capabilities and responsible use of AI in applications.	A/I

• Strong planning and organisation skills, with the ability to work under pressure and produce high quality work to tight deadlines. • Commitment to customer service principles and standards. • Ability to support and coach others, sharing knowledge and contributing to a positive learning culture within the team. • Reliable and flexible approach to changing priorities and service needs.
