

Job pack

Message from the President and Principal

Thank you for your interest in this role and in Queen Mary University of London. Working at Queen Mary means being part of a unique, world-class global University with a long, proud and distinctive history.

Our founding institutions, the London Hospital Medical College, St Bartholomew's Medical College, Westfield College and Queen Mary College, were founded to provide hope and opportunity for the less privileged and otherwise under-represented.

Today, we remain true to the vision of our founders by continuing to improve lives locally, nationally and internationally through the seamless combination of our world-leading strengths in education and research.

The Queen Mary community – our staff, students and alumni – is the heart and soul of our University. We are proud to provide an inclusive and nurturing environment so that staff and students from all backgrounds can develop, flourish and achieve their full potential.

I look forward to welcoming you to our unique University and working with you to realise our ambitions.

Professor Colin Bailey, President and Principal

Our strategy 2030

In 2019, Queen Mary University of London launched a bold new Strategy with the vision to open the doors of opportunity. By 2030, we will be the most inclusive university of its kind, anywhere. We are doing this by building on our existing cultural diversity to create a truly inclusive environment, where students and staff flourish, reach their full potential and are proud to be part of the University. Continuing our long tradition of commitment to public good, we will generate new knowledge, challenge existing knowledge, and engage locally, nationally and internationally to create a better world.

We have five core values that will help us to reach this goal:

We are **inclusive**, supporting talented students and staff regardless of their background, and engaging with our local and global communities.

We are **proud** of the difference we can all make when we work collectively.

We are **ambitious**, fostering innovation and creativity, disrupting conventional thought, and responding with imagination to new opportunities.

We are **collegial**, promoting a strong community through openness, listening, understanding, co-operation and co-creation.

We are **ethical**, acting with the highest standards, and with integrity, in all that we do.

To enable our staff to flourish and to reach their full potential throughout their employment at Queen Mary, we offer a range of benefits:

Staff benefits

- Annual leave – the full-time annual leave entitlement is 30 working days (not including bank holidays).
- [Season ticket loan scheme](#)
- [Pension scheme](#)
- [Reward and recognition schemes](#)
- [Staff Networks](#)
- [Cycle to work scheme](#)
- [Qmotion sport fitness centre](#)
- [Employee Assistance Programme](#)
- [Family friendly policies](#)
- [Flexible working practices](#)

Job description

Job details	
Job title	Integration Developer
Department	IT Services
Reports to	Prog Director AI Automation, Apps and Strategy
Grade and salary	Professional, Grade 6, £54,617 - £60,901 per annum
Hours per week	Full-time
Appointment period	Fixed-term (12 months)
Current location	Mile End Campus
Work activity type	Technical / Development

Job context

This role sits within IT Services and joins the team building Queen Mary University of London's new event-driven integration platform. The platform connects the university's core systems across student records, finance, HR and payroll, research administration, library and curriculum, identity and CRM, alongside a wider set of operational systems, and supports a large estate of flows between these systems and the downstream applications that depend on them.

The platform provides an event-driven backbone for data flow across the university, designed for reliability, observability and clean separation between producers and consumers. It represents a wider shift away from point-to-point integrations toward event-driven design, with database migrations and change-data-capture pipelines among the early high-impact pieces of work. It runs on Azure Kubernetes Service, built around Kafka-compatible event streaming (Redpanda) with Redpanda Connect for source and sink connectors. Services and connectors are written in Go and Python, delivered through GitOps with OpenTelemetry for observability.

Job purpose

The Integration Developer is an experienced software engineer responsible for building and maintaining integrations across the university to a high standard, with peer review and engineering rigour a core part of day-to-day work. The postholder will work primarily on the new event-driven platform, designing event flows, connectors and integration services that move data reliably between systems.

This is a hands-on, senior development role focused on event-driven integration. Alongside day-to-day delivery, the postholder is expected to vet integration patterns, take a leading part in pull request review and drive continuous improvement in how the team designs, builds, tests and operates integration flows. The emphasis is on backend work in Go and Python, including connectors, transformations and event-processing services.

The Integration Developer will join a small, high-impact engineering team within IT Services and will work closely with other developers to set and uphold engineering standards across integration work. The role is one of the senior engineering voices in that team, working alongside the Head of Engineering and peer developers to shape how a still-evolving platform is built. The postholder will containerise and deploy their services using Docker and Kubernetes, with support available from the wider team. This is not a platform-engineering role. The role reports to the Programme Director for AI Automation, Apps and Strategy.

Main duties and responsibilities

Integration and Event-Driven Development

- Design and build integrations between university systems, third-party SaaS products and the integration platform.
- Model business events and design topic structures, schemas and data contracts that hold up across many consumers.
- Develop event-driven services in Go and Python that consume, process and produce events reliably.
- Apply integration patterns including request/reply, event-carried state transfer, event sourcing and saga as appropriate to the problem.
- Implement idempotency, retry, dead-letter and replay handling so flows recover cleanly from failure.

Connector and Pipeline Development

- Build and maintain source and sink connectors using Redpanda Connect, including change-data-capture pipelines from operational databases.
- Develop custom connectors and stream-processing components in Go or Python where existing connectors do not fit.
- Define the producer-side schemas and field mappings for each connector, working with source-system owners to keep them in step with upstream changes.
- Troubleshoot connector failures and improve the reliability and observability of pipeline flows.

Engineering Standards and Peer Review

- Act as a senior peer reviewer on pull requests, holding the team to agreed standards of code quality, testing and documentation.
- Help set, evolve and uphold development practices covering branching, release management, testing, code style and architectural patterns.
- Identify weaknesses in existing integration workflows and propose practical improvements.
- Apply secure development practices in line with university data protection and information governance requirements.
- Coach and support other developers, giving constructive feedback and raising the overall capability of the team.
- Contribute to technical decisions on tooling, libraries and architecture, documenting choices where appropriate.
- Contribute to the specification, versioning and documentation of APIs and event contracts produced and consumed by integration services.

Operational Reliability and Observability

- Ensure integration flows are observable in production, with appropriate logging, metrics and tracing in place.
- Define and monitor service-level objectives for integration flows that downstream services depend on.
- Investigate production incidents affecting integrations, identify root causes and contribute to durable fixes.
- Contribute to runbooks and on-call documentation for integration components.

Collaboration and Delivery

- Work within an Agile delivery team, participating in sprint planning, standups, retrospectives and code reviews.
- Collaborate with product owners, application developers, data engineers and source-system owners to shape and deliver integrations.
- Produce clear technical documentation for integrations, event contracts and connectors.
- Contribute to knowledge sharing across the team and support the upskilling of colleagues on integration practices and tooling.

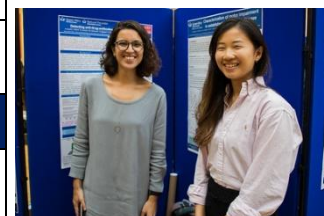

Person specification

This table lists the essential and desirable requirements needed in order to perform the job effectively. Candidates will be shortlisted based on the extent to which they meet these requirements.

Essential: Requirements without which the job could not be done.

Desirable: Requirements that would enable the candidate to perform the job well.

Qualifications	Essential	Desirable
Bachelor's degree in a relevant discipline (Computer Science, Software Engineering or similar) or equivalent professional experience.	☐	☒
Postgraduate qualification in Computer Science, Software Engineering or a related discipline.	☐	☒
Professional certifications in cloud platforms (e.g. Azure Developer Associate, Kubernetes Application Developer).	☐	☒
Experience/Knowledge		
Professional software development experience, including time spent as a senior developer on integration or data-platform work.	☒	☐
Strong experience designing and building event-driven systems using Kafka, Redpanda or similar event streaming platforms.	☒	☐
Strong experience developing services in Go.	☐	☒
Experience developing services in Python.	☐	☒
Strong understanding of integration patterns including request/reply, event-carried state transfer, event sourcing and saga, and when to apply them.	☒	☐
Demonstrable experience acting as a senior reviewer on pull requests and holding a team to agreed development standards.	☐	☒
Experience designing, building and consuming RESTful APIs and webhooks.	☐	☒
Experience of test-driven or well-tested development covering unit, integration and end-to-end tests.	☒	☐
Experience working in Agile teams (Scrum, Kanban or similar).	☒	☐
Experience delivering work to tight deadlines and managing competing priorities.	☒	☐
Experience with observability tooling (Prometheus, Grafana, OpenTelemetry) and distributed tracing.	☒	☐
Experience with Kafka Connect, Redpanda Connect or similar connector frameworks.	☐	☒
Experience implementing change-data-capture (CDC) pipelines from operational databases.	☐	☒
Experience designing and evolving event schemas and data contracts using formats such as Avro, JSON Schema or Protobuf.	☐	☒
Experience with stream-processing frameworks (Kafka Streams, Flink, ksqldb or similar).	☐	☒

Experience integrating with enterprise systems including SaaS products, directory services and data platforms.	☐	☒
Experience working with cloud platforms, ideally Microsoft Azure.	☐	☒
Experience building, containerising and deploying services using Docker and Kubernetes.	☐	☒
Experience with GitOps practices and tooling (e.g. Argo CD, Flux) for continuous delivery.	☐	☒
Experience of feature development within an established codebase, including code review, testing and CI/CD workflows.	☐	☒
Skills/Abilities		
Strong proficiency in Go, with clean, testable, production-quality code.	☐	☒
Ability to design and implement reliable integrations between heterogeneous systems.	☒	☐
Ability to review others' code constructively, giving clear feedback on quality, testing and design.	☒	☐
Familiarity with version control (Git), CI/CD pipelines (e.g. Azure DevOps) and Infrastructure as Code.	☒	☐
Excellent written and verbal communication skills, with ability to document technical designs and decisions clearly.	☒	☐
Ability to articulate technical concepts to both technical and non-technical audiences.	☒	☐
Familiarity with API design principles and versioning strategies.	☒	☐
Working knowledge of Docker and Kubernetes sufficient to build, deploy and maintain own services (or willingness to pick up on the job).	☐	☒
Understanding of security best practices across integrations and event flows.	☐	☒
Other		
Ability to work effectively in a collaborative, cross-functional team environment.	☒	☐
Desire to stay current with modern integration patterns and event-driven technologies.	☒	☐
Motivated by delivering practical outcomes that improve university operations.	☒	☐
Experience working in regulated environments (e.g. higher education, public sector, NHS or financial services) with awareness of relevant data protection and information governance considerations.	☐	☒
*The ability to meet UK 'right to work' requirements.	☒	☐

* The University has a legal responsibility to ensure that all potential employees can provide documentary evidence of their legal right to work in the UK prior to commencing employment.

Visa Sponsorship

For those who do not have a right to work in the UK, the University is a UKVI licensed sponsor and is able to issue a Certificate of Sponsorship (CoS) to successful candidates who are offered skilled roles and meet the eligibility criteria. The CoS enables candidates to apply for a Skilled Worker visa. Further information on the Skilled Worker visa can be found via: www.gov.uk/skilled-worker-visa

Global Talent Visa Route

The Global Talent visa is an alternative route to sponsorship, directly applied for by the applicant. It is open to those wishing to work in the UK and who are a leader or potential leader in the fields of academia or research, arts and culture, and digital technology. Further information on the Global Talent Route can be found via: <https://www.gov.uk/global-talent>

For [additional](#) information on both visa sponsorship and non-sponsorship [visa](#) routes, please visit the UK Visas and Immigration website: <https://www.gov.uk/browse/visas-immigration/work-visas>

Academic Technology Approval Scheme (ATAS)

Academics and Researchers applying for Skilled Worker visas and Sponsored Researchers applying for Government Authorised Exchange visas who will be undertaking research activities, at PhD level or above, in the one of the [ATAS listed subject areas](#) will be required to obtain an ATAS certificate before they can apply for a visa to work in the UK.

Exemptions will exist for nationals from the EEA, Australia, Canada, Japan, New Zealand, Singapore, South Korea, Switzerland and USA and those applying for Global Talent Visas. For further information on this, please visit the UK Visas and Immigration website: <https://www.gov.uk/guidance/find-out-if-you-require-an-atas-certificate>

EDI Initiatives

Queen Mary is committed to advancing Equality, Diversity and Inclusion (EDI). We hold a Silver Institutional [Athena SWAN](#) award for advancing gender equality and champion a number of [EDI initiatives](#) across the University. We also offer a number of development programmes including [Springboard](#), [Aurora](#) and [B-Mentor](#).

We are committed to championing EDI relating to all protected characteristics and other underrepresented and marginalised groups under the Equality Act 2010. We offer 'Introducing Inclusion' training for staff to give them an understanding of EDI related issues and provide them with the tools needed to champion inclusivity and embed best inclusive practice in all the work they do. EDI is built into everything we do at Queen Mary, and is championed through a well-established governance structure. If you are interested in learning more about Equality, Diversity and Inclusion at Queen Mary and how to get involved then please contact hr-equality@qmul.ac.uk.

Flexible Working

Queen Mary is proud of the diversity of its staff and students. We encourage inclusive practices in everything that we do, to ensure that everyone who works here feels valued and enabled to have a positive working experience. We are therefore open to considering applications from candidates wishing to work flexibly, balanced against business need. Our [Flexible Working Policy](#) includes examples of some of the flexible working arrangements that could be considered. If you feel that this is something that may be of benefit to you, please do ask.

Family Friendly Policies

Queen Mary recognises the commitments that staff have to their family and the importance of work-life balance. To support this Queen Mary offers a range of [family friendly policies](#) with enhanced rates of pay available for family-related leave, following a qualifying period of service.

Further Information

Details about the school/Department/Institute can be found at:

<https://www.qmul.ac.uk/its/>

Informal enquiries should be made to:

Name: Christos Myrsakis

Email: c.myrsakis@qmul.ac.uk

General Information

Please note that we advertise our salaries on a range to indicate the trajectory of progression that can be made. Appointments are usually made at the start of the salary range. The Queen Mary salary structure includes automatic pay progression within the published grades, subject to service, funding and performance. In addition to this, there are performance related annual pay review schemes in place.
